Electrical Engineer P.Eng/OIC

Description

We are currently looking for an electrical engineer who holds an OIQ designation to join us at any one of our locations (Kelowna, Calgary, Winnipeg)

If you already have your P.Eng. designation in Canada, you can apply to the Ordre des ingénieurs du Québec (OIQ) for registration. However, you must be fluent in French and able to demonstrate that you meet all Quebec-specific requirements prior to the start date of employment. We also require at minimum 5 years experience in the fields of commercial, institutional, industrial, multi-family, and commercial projects.

The person joining our team, should be able to contribute to Tower's growth and help us maintain our position in the market as a client-focused, multi-disciplinary consulting firm.

Responsibilities

For maximum success in this role, candidates should have between 5 to 10 years of experience in commercial and institutional electrical design. We are seeking someone who takes pride in their work, and who will go the distance to ensure both accuracy and on-time delivery. In return, we provide excellent opportunities for professional development and advancement.

Key responsibilities include the following:

- Work closely with other senior designers, engineers, and drafting staff on projects that include lighting, power, emergency system, fire alarm design, and single line diagram development in accordance with Canadian Electrical Code;
- Develop electrical drawings and schedules with drawings sets including preliminary, schematic, general arrangement, and detail design tender, and construction drawings for a wide range of clients.
- Perform calculations and select necessary electrical, lighting, and life safety equipment for each project
- Ensure compliance to local Codes and Standards and communicate findings to team members
- Set and Review project deliverables including reports, calculations, drawings and specifications
- Actively participate and all contract administration activities for the projects
- Visit project sites to conduct surveys of existing electrical systems;
- Establish and maintain relationships with appropriate client stakeholders, participating in design team meetings and providing day-to-day contact on project status and changes. Communicate project specifications to ensure smooth delivery
- Maintain familiarity with current techniques, industry developments, etc.
- Monitor and assign resources appropriately to streamline project efficiency and maximize deliverable outputs.
- Mentor Junior design team.
- Conduct Site visits during construction to confirm installation is consistent with drawings and specifications
